

D-TEC™

A Secure Deposit Bag Solution

Superior Bag is proud to introduce our **D-TEC™** security closure system. **D-TEC™** is a wide temperature spectrum, tamper evident closure system; designed to provide a new, higher level of tamper evidence through enhanced visibility. The striking contrast of the **D-TEC™** tape gives improved visible warning of tampering at any temperature extremes.

- Only one warning message is needed to protect against the wide range of methods used to compromise security bags.
- It's unmatched, high contrast warning provides tamper evidence from both sides of a clear bag, greatly speeding up processing without compromising security.
- No false positives, or failure to activate as with unreliable thermochromatic (heat sensing) or aquadetec (moisture) inks.
- New, more aggressive adhesive keeps an over stuffed bag sealed! It even retains strength until heated past the melting point of the closure itself, providing content security beyond ordinary tamper evidence.
- Withstands abusive handling without false message activation.
- Fully compatible with all film structures and available on the complete range of Superior Bag's products, including **SENTRYGreen™**, our environmentally friendly biodegradable bags.
